## Findings

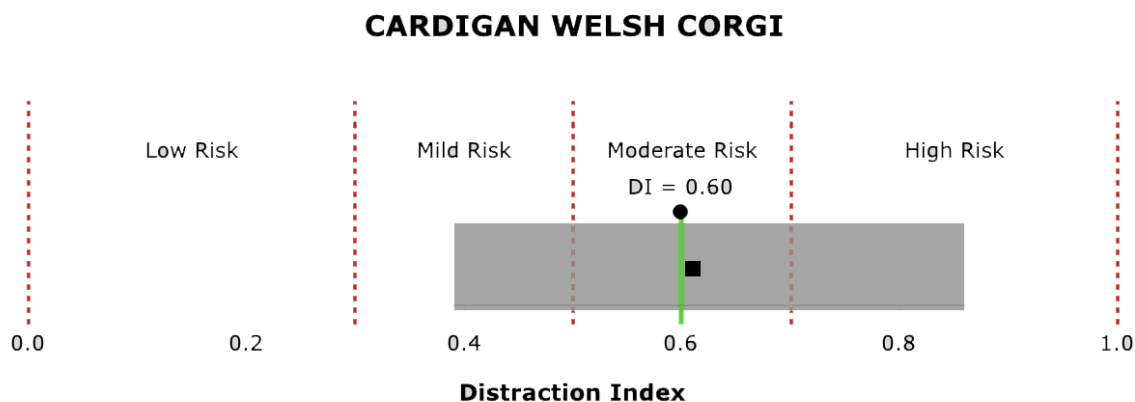

Distraction Index (DI): Right DI = 0.60, Left DI = 0.59.  
 Osteoarthritis (OA): **No radiographic evidence of OA for either hip.**  
 Cavitation/Other Findings: No cavitation present.

## Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.60.

OA Risk Category: The DI is between 0.50 and 0.69. This patient is at moderate risk for hip OA.

Distraction Index Chart:

**BREED STATISTICS:** This interpretation is based on a cross-section of 382 canine patients of the CARDIGAN WELSH CORGI breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.39 - 0.86) for the breed. The breed average DI is 0.61 (solid square). The patient DI is the solid circle (0.60).

**SUMMARY:** The degree of laxity (DI = 0.60) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a moderate risk to develop hip OA. **No radiographic evidence of OA for either hip.**

**RESULTS:**

Normal cardiovascular examination via auscultation - No evidence of congenital or acquired heart disease was noted. Since acquired heart disease may develop later, these evaluation results remain valid for one year, and annual examinations are recommended to continue to monitor cardiac health.
